

Assignment 5

Q1. Write steps to share and remix project.

ans.

Sharing a project on Scratch:

1. Open scratch
2. click on the "Sign in " button in the top-right corner
3. Enter your username and password to log in to your Scratch account
4. Click on the "Create" button in the top navigation bar to open the project editor and start a new project
5. Go to your profile page by clicking your username in the top-right corner
6. Under "My Stuff" , find the project you want to share
7. Choose the project image to open the project page.
8. If you're editing the project, click on "File" at the top-left corner.
9. Select "Save now" to save your work.
10. After saving your project, click the "Share" button located at the top of the project editor.
11. Your project will now be publicly accessible to other Scratch users.
12. Once shared, the project will have its own public URL.
13. You can copy this URL from the address bar of your browser and share it with others.

Remixing a Project on Scratch:

1. Browse the Explore page or search for a project that you would like to remix.
2. When you find a project you want to remix, click on it to open the project page.
3. On the project page, click the "See Inside" button. This opens the project in the editor, where you can view the code, sprites, and other components of the project.

4. Once you are inside the editor, click the "Remix" button at the top of the screen to make a copy of the project to your account.
5. This will create a new project in your profile, based on the original project.
6. Now you have your own copy of the project you can begin making changes:
 - Edit the code, sprites, sounds, or backgrounds.
 - Add new features or modify existing ones to fit your needs
7. After you are made your changes, click the "Share" button at the top to make your remix public.
8. You will also see a "Remixed from" section that credits the original creator of the project.
9. After sharing, you can copy the URL of your remix from the address bar and share it with others.

Q2. What is project Planning ?Explain management skills.

ans.

1. Project planing is an act of organizing and defining all the steps, resources, and tasks, along with their timelines required to achieve a certain project objectives. It is the process that involves various steps like objectives, the identification of resources, cost estimation, schedules, and managing risks. It makes sure that the project is completed on time, on budget, and within the set goals.
2. Managements Skills:
 - Management Skills are the skills used to steer, coordinate, and manage projects or teams.
 - Keys skills include:
 1. Leadership : Inspiring and guiding the team.
 2. Communication: clear communication and listening attentively
 3. Organization: Planning, prioritizing, and managing resources efficiently.
 4. Problem Solving: Finding effective solutions to problems.
 5. Decision Making : The ability to make the right decision that benefits the team or project at hand.
